-Data Visualisation for the World Health Organisation

MSc dissertation written with the JavaScript library D3 that visualised the smoking data published in the HBSC (Health Behaviours in School-aged Children) report for a richer, more interactive experience than the paper report. Worked with stakeholders and users to create the most engaging experience followed by user studies.

-Undergraduate dissertation

System built to notify students via Twitter (using Java and Java Libraries for Twitter and Bluetooth Twitter4J & bluecove respectively) of their lecturers office availability. A further iteration of design was then performed using Android. User tests and stakeholder interviews performed

-Kits4Causes (www.kits4causes.org)

A charity that uses the way football brings communities together by donating football kits to developing countries and runs coaching initiatives in those same countries. Sketches and high fidelity prototypes to design the site and then implementation and maintenance

-Personal Website (www.ashleyhogarth.co.uk)

Designed and built using HTML5 & CSS3 with jQuery & JavaScript. Optimised for both the desktop and mobile experience.

-Data Creator (www.data-creator.co.uk)

Graphic design work found on portfolio webpage
